

Compass

The ideal starting point

Identify immediate transformation priorities with strategic direction

Compass is the starting point for most IT and data projects, combining our specialist teams of business analysts and technology experts to provide a comprehensive plan to improve business productivity and security.

TiG help organisations with compliance requirements, problematic legacy infrastructure, and unsafe security postures to turn things around and improve the workplace as a whole.

A team of business analysts and technology experts

Our expert team will perform a full review and digital maturity assessment to decide how your business can achieve maximum benefit from investment.

Compass takes four days from start to finish and you'll receive a comprehensive report and technology roadmap. This also makes it ideal for Private Equity partners conducting due diligence and looking for cost-efficiencies in new portfolio businesses.

“
Our customers need a partner they can trust to give them a competitive advantage. If they succeed, we succeed.”

George Georgiou,
Chief Operating Officer

How we do it:

1. One of our transformation specialists will set up a preliminary meeting to find out more about your business, how you're currently working and the systems you're already using. During this meeting we will also discuss any compliance requirements so we can design a solution tailored to meet these needs.
2. We'll set up a one-day discovery workshop with our technical architects and your assigned project-manager, who will work with you throughout the process. During this workshop we'll talk you through projects and enhancements that will make a tangible difference to the way your business works
3. We'll send you a comprehensive report detailing the recommended solution, fully modelled to show potential cost-efficiencies over a three-year period, along with a technology roadmap.

Contact us to find out more and speak to our experts.
