

# Cyber Security Accelerator Workshop

Understand your threats and experience the benefits of a Microsoft cloud-native SIEM

**When it comes to defending against cyber attacks, organisations need to consider the whole digital estate. Threats are also getting more frequent and more sophisticated.**

As organisations expand and evolve their digital estates, with new apps, data and devices, having an integrated approach to security is more important than ever.

Designed for today's security leaders, the TiG Cyber Security Accelerator Workshop focuses on learning your organisation's unique needs and develops a strategic plan based on approaches recommended by our expert consultants.

This engagement includes a Threat Check Assessment that will allow you to gain visibility into threats in your Microsoft 365 cloud environment across email, identity and data.

The workshop also includes an Azure Sentinel experience, that will collect data at cloud scale across all users, devices, applications, and infrastructure, both on-premises and in the cloud.

## Workshop scope

The engagement will start remotely via an initial scoping call and initiation of the Threat Check tool. There will then be a one day workshop, at a location of your choice, focused on the following key objectives:

- ✔ To provide insights and education on security trends and the Microsoft security story.
- ✔ Gaining an understanding of real-time threats to your organisation.
- ✔ Understand the benefits of Azure Sentinel and get a roadmap based on your objectives.
- ✔ Creating a plan and high-level roadmap to mitigate the threats.
- ✔ Providing hands-on experience of Microsoft security technology.

## The initial scoping call

Before the workshop, we will set up an preengagement call to define the scope of the engagement, identify stakeholders, and align expectations.

## The data assessment phase

After the initial scoping call we'll run a Threat Check across your Microsoft 365 cloud environment and configure remote monitoring via Azure Sentinel - to collect data sets.

We'll then review threat data and walk you through the findings, providing visibility, insights and recommendations to mitigate realtime cyber threats against your organisation.

## The discovery session

You'll learn Microsoft's vision when it comes to security.

TiG's cyber security experts will work with key stakeholders to create a detailed assessment of your IT and security priorities, influences and initiatives.

You'll also get the chance to experience what integrated security means to Microsoft through an immersive exercise, giving you a hands-on opportunity to explore new ways of handling security needs and challenges.

## Workshop agenda:

09:00 - 10:00

### Microsoft security overview

Covering Microsoft's vision for security and highlighting intelligence capabilities from a wealth of security-related signals and insights.

10:00 - 12:00

### Discovery session

We'll create a detailed assessment of your IT and security priorities, influences and initiatives.

12:00 - 13:00

### Lunch

13:00 - 14:00

### Threat Check and Sentinel findings

We'll report back on your Threat Check and Sentinel results and make recommendations for improvement.

14:00 - 16:00

### Customer Immersion Experience

We'll take your team through an immersive exercise, giving you a hands-on opportunity to explore new ways of handling security needs challenges.

16:00 - 17:00

### Recommendations and next steps

## Recommended attendees

It is important that the right people attend this workshop so that we can get a good understanding of your business, infrastructure and security controls.

In light of this, we would recommend the following roles:

- CISOs, CTOs, CSOs, CIOs
- Heads of security
- Security infrastructure management

## Next Steps
