Compliance Accelerator Workshop

The ever-increasing amount of data collected by organisations is raising concerns around threats to privacy and regulatory compliance.

As your business-critical data expands, having an integrated approach to compliance is more important than ever. However, discovering and managing all of your organisational data and information can be very challenging.

Not long ago, managing data just meant dealing with documents and emails. Pervasive digital technology has greatly expanded the information universe with messaging, videos, images, and IoT. Data is exploding, and regulations are increasing. Both contribute to increased risk exposure.

Protecting information is critical to ensuring trust and meeting compliance requirements. But first, you need to know what data you have, where it is, how it's being used, and the compliance risks that may exist.

The workshop

Designed for today's security and compliance leaders, the TiG Data Intelligence Compliance Workshop gives you the insights you need to better discover, protect, and govern your corporate data.

The engagement will start remotely via an initial scoping call and initiation of a Compliance Check tool. There will then be a one day workshop, at a location of your choice, which will be focused on the end-to-end Microsoft security and compliance story.

The workshop will showcase Microsoft's key information protection and compliance technologies and help you gain a better understanding of your organisation's objectives and priorities, and how they align with Microsoft's security solutions roadmap.

Workshop deliverables

- ☑ Learn about Microsoft's vision for compliance and risk management.

- ☑ Create an assessment of your risk management priorities and compliance requirements.

- ☑ Assess your organisation's dark data risks with Compliance Check.

- ☑ Understand and prioritise how to mitigate potential compliance risks.

- ☑ Attain actionable next steps based on your needs and objectives.

- ☑ Gain hands-on experience of Microsoft compliance technologies.

TiG Data Intelligence

Compliance overview

We'll kick off the workshop with an overview of your compliance challenges and Microsoft's integrated complianc e proposition.

Discovery session

TiG's security and privacy experts will work with key stakeholders to create a detailed assessment of your IT and compliance objectives, priorities, and initiatives.

Compliance check findings

Review discovery data and walk through actionable recommendations and suggestions for improved mitigation and governance.

Compliance immersion experience

Experience what integrated security means to Microsoft through an immersive exercise, giving you a hands-on opportunity to explore new ways of handling compliance needs and challenges.

Workshop attendees

It is important that the right people attend this workshop so that we can get a good understanding of your business, infrastructure, compliance controls and the operational aspects of how you manage security and compliance.

In light of this, we would recommend the following roles:

- ☑ CISO or senior security infrastructure management
- ☑ Data Protection Officer
- ☑ Compliance focussed technical individuals
- ☑ Security focussed operational individuals
